# Programming With Java IDL: Developing Web Applications With Java And CORBA

Synopsis

Combining the versatility of Java with the interoperability of CORBA, Java IDL (Interface Definition Language) lets you build object-oriented systems that freely interact over the Internet or intranets, regardless of ORB or programming language. Now Programming with Java IDL offers Java developers a quick, easy way to fully master this important new Web development tool. With this valuable guide, developers learn Java IDL programming by actually building powerful applications using distributed objects. Experts Geoffrey Lewis, Steven Barber, and Ellen Siegel first bring you up to speed on CORBA, Java, and Java IDL basics. They provide you with step-by-step instructions and source code (also available at the companion Web site) to build three full-fledged distributed systems of increasing complexity. Then, combining valuable insider tips with business system programming savvy, they show you how to quickly modify the code to build your own powerful custom applications. A hands-on guide to harnessing the power of Java and CORBA to create super-versatile business applications, Programming with Java IDL is an indispensable working resource for Java developers. Visit the companion Web site at www.wiley.com/compbooks/lewis There you'll find: * All the source code from the book * Updates on latest developments in Java IDL tools and techniques. Customer Reviews

This ia good material on CORBA with some useful discussions on CORBA services and architectural concepts. I have been doing a lot of CORBA and find this book to be a good guide.

Book doesn't even explain what is meant by "Java IDL" until page 91, and even there the definition is a poor one. A pretty good definition finally appears on p 241.

I've never seen a book about Java IDL quite so clear and, well, inspiring. Plus the cover is pretty.
