Synopsis

Finally, the most informative, fully illustrated, step-by-step guide to designing and building your own home wine cellar! This beautifully photographed and illustrated full-color book covers all of the details of locating and preparing the right construction area. It includes the latest designs, as well as up-to-date racking and organization styles and techniques. Perhaps most important, this book addresses all the thorny challenges of temperature and humidity control—just where most home wine cellars fail. Parts of the book were helpful and the photos were interesting. However, aside from aesthetics, the critical issues in building a cellar are the vapor barrier, insulation and cooling system. It would have been helpful to have more technical advice or at least technical advice that was easier to follow. For example, an explanation of why the vapor barrier must be on the outside everywhere (to keep condensation away from the insulation) would be more helpful than just a bald statement that it should be. The diagrams are clear as far as they go, but the explanation on how to put a vapor barrier up and insulate a ceiling is confusing in the absence of an explanation of the purpose of the vapor barrier. For example, if you have wires, pipes and ventilation ducts in your basement ceiling

as most people do, what is the best approach? Should you drop the ceiling and then install a vapor barrier followed by insulation or is there something else you can do? Likewise, a discussion of the pros and cons of using a glass vs. solid door, whether to have electrical outlets inside and if so how many and why, whether to place the light switch inside the room or out, and a discussion of how to properly ventilate the cooling unit to optimize operational efficiency all would have been helpful. Finally, since the author is in the business, I would assume that he uses particular brands of cooling units and has specific recommendations regarding size, makes and models--all of that would have been useful information. To be fair, I did a lot of research and nobody seems to be able to write clearly on this subject and there is a lot of conflicting information on various aspects of design and construction.
